BHOPAL

Name: - NAYAN VERMA

Registration Id: - 25MIP10094

Branch: - Integrated MTECH in computer science with specialization in computational and data science

Course: - Digital Literacy

Title: - NGMC Graded course

Platform: -VITyarthi

Task 1: - Create a Digital Literacy Awareness Infographic

For my infographic project, I used **Canva**, an easy-to-use online design tool that provides a variety of templates, icons, and layout options. Canva helped me create a visually appealing and wellstructured design without needing advanced graphic design skills.

My design focuses on **Digital Skills for Students**, covering key topics such as digital literacy, useful digital tools, safe internet practices, professional online presence, and email etiquette. The infographic is divided into clear sections with headings, icons, and short bullet points to make the information easy to understand. I used a simple colour scheme and balanced layout so that the content looks organized and attractive.

One thing I found slightly difficult was arranging all the information in a limited space without making the design look crowded. However, it was also interesting to experiment with different layouts, fonts, and icons to improve readability. Overall, this project helped me learn how to present information creatively and effectively using digital tools.

Task 2: - Build Your Student Digital Portfolio

For my digital portfolio, I selected GitHub, LinkedIn, and Kaggle as my primary platforms. GitHub is widely used by developers to host and manage code repositories, and I plan to use it to showcase my projects, practice coding, and collaborate on open-source work. LinkedIn is a professional networking platform that helps students connect with recruiters and industry professionals. I will use it to build my professional identity, share achievements, and explore internship opportunities. Kaggle is a platform focused on data science and machine learning, offering datasets and competitions. As a student specializing in Computational and Data Science, I will use Kaggle to improve my analytical skills and participate in competitions. Over the next four years, I aim to consistently update these platforms, build strong projects, and develop a professional presence that will help me secure internships and career opportunities.

Task 3: - Explore Coding & Collaboration Platforms

For this task, I used Google Forms and Google Sheets along with Hacker Rank to improve my digital and technical skills. Using Google Forms, I created a Digital Literacy Awareness Quiz with different types of questions such as multiple choice and short answer. I linked the form to Google Sheets to automatically collect and organize responses, which helped me understand how data can be managed and analysed efficiently. In addition, I used Hacker Rank to practise coding and completed a beginner-level Python challenge. This helped me strengthen my programming fundamentals and problem-solving skills. Through this activity, I learned how to use online tools for both collaboration and coding practice. These platforms will be very useful in my academic journey, as they will help me in project work, data collection, coding practice, and skill development. Overall, this task enhanced my understanding of digital tools and improved my confidence in using them effectively.

Task 4: - Draft a Professional Email & Etiquette Guide

Poor digital communication can lead to serious misunderstandings and consequences. For example, a student once posted a sarcastic comment about a teacher on social media, assuming it would be taken lightly by friends. However, the post was shared widely and eventually reached the teacher, leading to disciplinary action and damage to the student's reputation. This situation could have been avoided if the student had thought carefully before posting and maintained a respectful tone online. Digital communication lacks tone and context, so messages can easily be misinterpreted. To prevent such issues, individuals should always communicate responsibly, avoid posting impulsively, and consider the potential audience and impact of their words. Being mindful and respectful online helps maintain a positive digital identity and prevents unnecessary conflicts.

Task 5: - Cybercrime Awareness Case Study & Prevention Guide

While researching cyberbullying, I was surprised by how serious its impact can be, even though it happens online. Many people assume that online comments are harmless, but they can deeply affect a person's mental health and confidence. I learned that cyberbullying can happen to anyone, especially students who are active on social media. What stood out to me is how easily anonymous accounts can be used to harass others without immediate consequences. As a result, one habit I will personally change is being more mindful of what I post or comment online. I will ensure that my communication is respectful and supportive, and I will also act by reporting or blocking any abusive behaviour I come across. This awareness will help me contribute to a safer and more positive online environment.
